COAL PROJECT PROPOSAL

TITLE:(Programmable KEYS)

Group Members:

1. Yousuf Ahmed   (21K-4594)
2. Qasim Hasan   (21K-3210)
3. Sufiyaan Usmani (21K-3195)

Description:

Our project's main theme will be accessing various functionality by holding the desired key (Alt) and directly accessing different applications by pressing keys from A-Z to open the functionality settted for that specific key value.

Features:

- By pressing the (Alt+key), we will be able to open any application, such as Dev C++ or a calculator, or any directory folder. And there are many more.
- We will be able to immediately perform Windows operations such as volume up and down or scroll, brightness, copy and paste, and so on.
- GUI for setting up and saving the keys for a specific functionality will be provided.

PROJECT OUTCOME:

This software was created from scratch and is not available anywhere on the internet. Its major goal is to allow users to access everything on their computer immediately using a simple key combination, making work more efficient.

LIBRARAY USED IN PROJECT:

i.)   Kernel32.inc
ii.)   Irvine32.inc
iii.)   Masm32.inc
